

2022 Sidney Mac Donald Russell Family Fellow

**Marian Fairgrieve, Ph.D.
Candidate, Molecular and
Cell Biology, Vance Lab**

Marian is a Ph.D. candidate in the Molecular and Cell Biology Department at UC Berkeley. She completed her B.S. at the University of Washington. As an undergraduate, she was a research intern at the National Oceanic and Atmospheric Administration, where she completed a research project characterizing molecular pathways that regulate teleost reproductive development. After graduation, she shifted her research focus to immunology and infectious disease. As a research technician in the laboratory of Dr. Michael Gale, Jr. at the University of Washington, she studied host-pathogen interactions and innate immune responses to flaviviruses. Now in the laboratory of Dr. Russell Vance, Marian studies host innate immune responses to *Mycobacterium tuberculosis*.
