

Henry Wheeler Center  
for Emerging and  
Neglected Diseases

## 2021 Irving H. Wiesenfeld Fellow

**William Pape, Master of  
Public Health Candidate,  
School of Public Health, Lab  
Manager**

**William Pape is a second year MPH student in the Global Health and Environment program at UC Berkeley's School of Public Health, studying climate change and zoonotic infectious disease, advised by Dr. Jay Raham. William seeks to address the relationship between humans, animals and the environment through traditional public health methodology, and is passionate about studying zoonotic infectious disease through the relationship that communities have with their pets and farm animals.**

**William is thrilled to spend this summer in the Eastern Cape of South Africa, where she will study the effects of climate change and Covid-19 on the rabies virus, and the interaction between wild and domestic animals on the perimeter of the Addo to Fish Biodiversity Corridor.**
