Irving H. Wiesenfeld and Kathleen L. Miller Graduate Fellowships

2014 CEND Graduate Fellowships

The purpose of the Irving H. Wiesenfeld and Kathleen L. Miller Graduate Fellowships is to provide research support to UC Berkeley graduate students involved in the discovery of effective treatments, diagnostics, and vaccines for emerging and neglected infectious diseases. The fellowship can be used to support research expenses, equipment, travel, and scientific exchange between labs at UC Berkeley and researchers in disease-endemic countries. Through the fellowship, awards of up to $5,000 will be made to qualified individuals.

Past recipients of this award have explored the complex interactions of pathogens, host immune responses, and environmental factors that contribute to infectious disease. Their work has been conducted in the laboratory as well as the in communities where these diseases are most prevalent. Each fellow is expected to present a seminar within one year of receiving the fellowship, and they must also submit a half-page report on activities by the end of the award year.

Eligible Applicants
Doctoral (PhD) students in the life sciences, chemistry, engineering, environmental sciences, math and information sciences, and public health are eligible for the fellowship. To apply, you must be mentored by a CEND-affiliated investigator.

To Apply
Submit a complete application package by February 1, 2014. As part of the application, you must develop a brief research proposal with the guidance of one or more faculty mentors at UC Berkeley (or UCSF if you are a UC Berkeley PhD student completing dissertation research at UCSF). Applications will be reviewed by a panel of CEND faculty members and awards will be announced in March 2014.

To apply, email the following materials to cend@berkeley.edu by midnight on February 1, 2012:

- Research Proposal (2 pages): project background, aims, methods, global health significance
- Curriculum Vitae (2 pages)
- Budget (1 page): travel, lab supplies, and other support
- Email of Recommendation (1 paragraph) from CEND faculty mentor

Evaluation will be based on scientific merit and the relevance of the project to emerging and neglected infectious diseases. Research proposals should clearly identify the fellow’s role in the project (as distinguished from the roles of faculty mentors or members of the lab) and the specific objectives and/or deliverables expected by the end of the fellowship.
